MEASURING STICK

The MEASURING STICK is a unique tool with several functions essential to implant treatment planning and surgical guidance.

The "caliper" end of the MEASURING STICK:

- Measures the distance between an implant site and a natural tooth
- Measures the distance between implants to be placed in an edentulous site

The "ruler" end of the MEASURING STICK:

- Measures the length of a natural crown that can then be compared to a radiograph. This provides you with information needed to calculate the radiographic discrepancy

If you are doing implants, The MEASURING STICK should be part of your armamentarium!

Only \$219.00
