

# *New From Alvelogro*

## *The Pritchard 3 Elevator*

**The Pritchard 3 Elevator (PR3)** is the perfect instrument to mix and prepare your graft material prior to placement into the defect. The thin tapered end is the ideal shape for spatulating two or more products together such as the *Marshmallow* (combination of PepGen P-15™ particulate and PepGen P-15 FLOW™). The contour end of the elevator allows you to achieve the right consistency of the mix and then is ideal for delivering the composite graft or the *Marshmallow* to the site.

**The flat end of the PR3** is the correct shape and size to combine larger amounts of products and the spade shape is an excellent device for delivery into large defects as well as the perfect instrument to contain the *Marshmallow* in the extraction site during the expansion process of this graft material.

**This multi use instrument** is an essential tool for the bone grafting procedures done in your office. It is versatile as well as economical and should be a part of your armamentarium.
