

IMPROV[®] temporary implant cement

IMPROV is temporary cement that is ideal for use with both implants and natural teeth.

The dual barrel syringe eliminates the mess and inaccuracy of two tube mixing.

The convenient static mixing tips are easily snapped into place on the dual barrel syringe.

A thin coat of IMPROV can easily be spread into the restoration for accurate placement.

- **IMPROV** offers strength & predictability by reducing the risk of loose crowns and improper seating
- **IMPROV**'s dual barrel delivery syringe eliminates inaccuracy and the mess of two tube mixing
- **IMPROV** offers a consistent working time without premature setting
- **IMPROV** is Eugenol free and can be effectively removed easily from both hard and soft tissue
- **IMPROV** is the ideal provisional cement for both implants and natural dentition
